

WETTER (RUHR), GERMANY – OCTOBER 22, 2026

SongFlip Launches Zero-Click Music Link Converter for Android and iOS

SongFlip bridges music streaming silos with automatic background link redirection, acoustic music recognition, Offline Club Mode, and universal playlist conversion.

German independent app developer **Daniel Notthoff (Goork)** today announced the official launch of **SongFlip** for Android and iOS. SongFlip is a privacy-first, zero-click mobile utility designed to eliminate streaming service friction by automatically intercepting shared music links and opening them directly in the recipient's preferred music player.

In today's fragmented streaming landscape, sharing a track often leads to a dead end: a friend sends an Apple Music or Spotify link, but the recipient uses YouTube Music, Tidal, Deezer, or Qobuz. Running transparently in the background, SongFlip detects incoming music links across messaging apps like WhatsApp, Telegram, Instagram, and iMessage, resolving the song within milliseconds and triggering playback immediately in the installed player of choice.

"Sharing music with friends should be effortless. SongFlip removes platform friction so everyone can enjoy songs in their favorite player without extra clicks."

— Daniel Notthoff, Founder & Developer of SongFlip

SongFlip supports seamless two-way conversion across **10 major streaming platforms**: Spotify, Apple Music, YouTube Music, Tidal, Deezer, Amazon Music, SoundCloud, Bandcamp, Qobuz, and Beatport.

● Uncompromising Privacy by Design

Built with a strict commitment to user privacy, SongFlip requires no user registration, stores no personal listening habits, and contains zero advertising trackers. All cache lookups are executed using anonymous **SHA-256 cryptographic hashes** hosted in Frankfurt, Germany.

● Availability & Pricing

SongFlip is available worldwide on **Google Play** and the **Apple App Store**. Core zero-click redirection is 100% free and ad-free. An optional **SongFlip PRO** tier unlocks unlimited acoustic recognitions, Offline Club Mode, the Universal Playlist Converter (up to 200 tracks), and high-resolution Audiophile matching via flexible monthly, annual, or one-time lifetime purchase options.

QUICK FACTS (AT A GLANCE)

1. Zero-Click Redirection

2. All 10 Services & Players

3. Listen & Flip + Offline

4. Playlist Converter & Export

● Key Features Introduced in SongFlip

Zero-Click Background Redirection

FREE CORE

Instant URL resolution and deep playback launching directly into your preferred streaming app without interrupting the chat or browsing experience.

Offline Club Mode

PRO

In clubs, venues, or festivals with no reception? Capture acoustic fingerprints offline; SongFlip automatically resolves the track and saves it to history once back online.

Audiophile Quality Matcher

PRO

Optional prioritization of 24-bit Hi-Res, Lossless, and original studio album cuts over radio edits and compilations on Tidal, Qobuz, Apple Music, and Deezer.

Listen & Flip (Ambient Music Recognition)

FREE & PRO

Identify music playing around you via high-precision acoustic fingerprinting from the app, Quick Settings tile, App Shortcuts, or Siri, resolving straight to your player.

Universal Playlist Converter (Up to 200 Tracks)

FREE & PRO

Convert full playlists across platforms with 50-track Zero-OAuth queue batches (Part 1–4), automatic duplicate removal, and portable .M3U8 / CSV file export.

Multi-Player Discovery & Smart Links

FREE CORE

Automatically detects installed official and alternative streaming clients. Generate universal smart links (songflip.link/s/...) so every friend can pick their player.

💎 For Journalists, Reviewers & Creators: Free PRO Lifetime Promo Codes

Reviewing SongFlip? We happily provide complimentary SongFlip PRO Lifetime unlock codes (Android & iOS) for press and editorial testing. Simply email hey@goork.de.
